MMTTY for FTDX101D/MP

10/3000D also for FT710 and FT991 and FT991A

>>for many other transceivers since the MMTTY setup is the same<<

MMTTY/TEXTFSK exemple & print screen by <u>hb9oab@gmail.com</u>

MENU setting with all setup for USB CABLE like config exemple on our site:

http://hb9oab.wlog2000.com (is my personal server then if PC online this is ready)

This MENU and MMTTY setup work RTTY FSK or AFSK without problem perfectly on all mode all band on radio setting as AM FM USB LSB DATA & RTTY indifferently. On RTTY mode (preferable) work FSK (key) on all other mode work with AFSK (audio)!

ATTENTION: Download first the EXTFSK.DLL for your PC from MMTTY site

The original info about installation procedure is:

- 1) Place your EXTFSK.DLL in the same directory where MMTTY.EXE is installed.
- 2) Open the TX page of MMTTY Setup window. Select EXTFSK from the drop-down list of PTT port.
- 3) Open the Misc page and select Sound+Com TxD (FSK) or Com Txd (FSK) at the TX port pane.
- 4) Push USB button and select A: Normal.
- You will have a small EXTFSK window popped up.
- 5) Select a COM or LPT port from the Port drop-down list. EXTFSK shows the status of the port that you have selected. If the status is NG, you should select another port.
- 6) Select the signals for FSK and PTT outputs.
- 7) To reverse the signal polarity, check Inv. FSK or Inv. PTT check boxes.

8) After setting the signal and polarity, you can push [...] button at the top right corner of the window to make it minimized.

NOTE: With my special config, if I usue my transceiver in MODE DATA-U/L the MMTTY is in AFSK, if I set the transceiver in MODE RTTY-L/U the MMTTY is in FSK without any config/setup modification... whit the simple SETUP MMTTY at TX_PORT at SOUND+COM_TXD(FSK) and not only at COM_TXD(FSK)

Here my full MMTTY WINDOWS SETUP:
