

FTdx3000d – ANT3 as RX ANT PROTECTED FOR BEVERAGE or LNA AMPLIFIER

I had also already checked with a simple tester (checking on the service manual):

ANT1/1 rx or tx ====> RX ANT3 GROUNDET (0)
ANT2/2 rx or tx ====> RX ANT3 GROUNDET (0)
ANT3 ====> DURING TX AS RX3/1 or RX3/2 the ANT3 GROUNDET (0)

MENU 032 ANT3:

The ANT3 jack enables to use an antenna for reception only.
Using MENU 032 ANT3 SETTING for switch:
ANT3/1 or ANT3/2
to save PREAMP LNB as RF ground protection

---Original Yaesu info---

[...]The antenna ports are connected to ground through a relay when inactive so the isolation is very good. You shouldn't have any problem.
